### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 9-13 are rejected under 35 U.S.C. 102(a) as being anticipated by Admitted Prior Art (hereinafter referred to as “APA”- the citations below pertain to Applicant’s specification).

APA teaches the following claimed limitations as follows:

9. A memory device comprising:

a gate stack pair with a space between them defining a contact opening (APA- Fig.2A and Fig.1 (9) and page 3 [0007];

a vertical oxide spacer adjacent to each gate stack of the gate stack pair (APA- Fig.2B(11) and page 3 [0007]); and

a respective continuous nitride layer overlaying each said vertical oxide spacer and each said gate stack (APA- Fig. 2C (12) and page 3 [0007]), neither of the continuous nitride layers extending to cover the contact opening between the gate stack pair (APA- Fig. 2D (12)).

10. The memory device of claim 9, wherein said gate stack comprises a floating gate and a control gate (APA- Fig.1 (4 and 6) and page 2 [0006]).

11. The memory device of claim 9, wherein said vertical oxide spacer is between about 50 Å and about 300Å in thickness (APA- page 3 [0007]).

12. The memory device of claim 11, wherein said vertical oxide spacer is about 100Å and about 200Å in thickness (APA- page 3 [0007]).

13. The memory device of claim 9, wherein said nitride layer has a thickness equal to about one half the width of said vertical oxide spacer (APA – compare Fig.2C (11 and 12)).

### ***Response to Arguments***

Applicant's arguments filed 7/25/03 have been fully considered but they are not persuasive. Applicant argues that his admitted prior art does not anticipate the amended claim language; however as shown above, the APA still anticipates Applicant's amendment. If the device structure exists at any time during the processing of the device, then the structure anticipates the claim language. Therefore, because layer 12 overlays the contact opening in Fig.2C and then is etched in 2D, it anticipates Applicant's claimed limitations exactly.

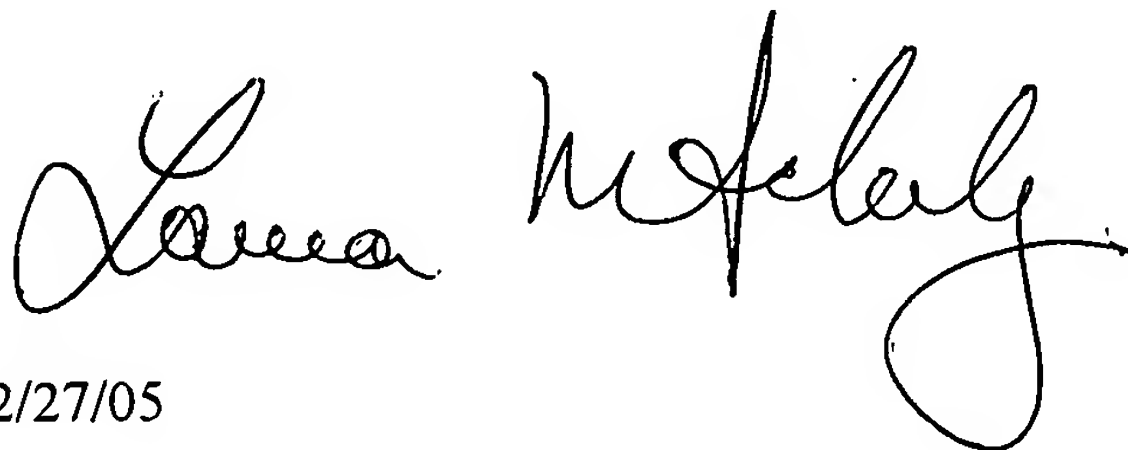

### ***Conclusion***
